Superconducting Nanowire Single Photon Detection System

We make the world’s fastest and most sensitive light sensors limited only by the laws of physics.

Single Quantum was established as the first European company manufacturing and commercializing superconducting single photon detectors. By sharing this groundbreaking technology, we aim to create a better future!

Our multi-channel detection system has already been chosen by more than 200 academic and industrial labs all over the world to perform complex optical measurements. The unique combination of unparalleled detection efficiency and time resolution is what makes our superconducting detectors the ideal choice for quantum communication, photonic quantum computing, infrared fluorescence spectroscopy, imaging, LIDAR and many other applications.

- high efficiency
- low jitter
- continuous operation
- plug and play
- 200+ happy users worldwide
- installation service and global support

Single Quantum Eos

Single Quantum Eos is a complete photon detection system that consists of a closed-cycle cryostat, helium compressor, electronic driver and up to 24 high performance fiber-coupled superconducting nanowire single photon detectors.

Our user-friendly electronic driver and software are unique in the market and enable fully computer-controlled operation and makes it effortless to interface with any programming language.
