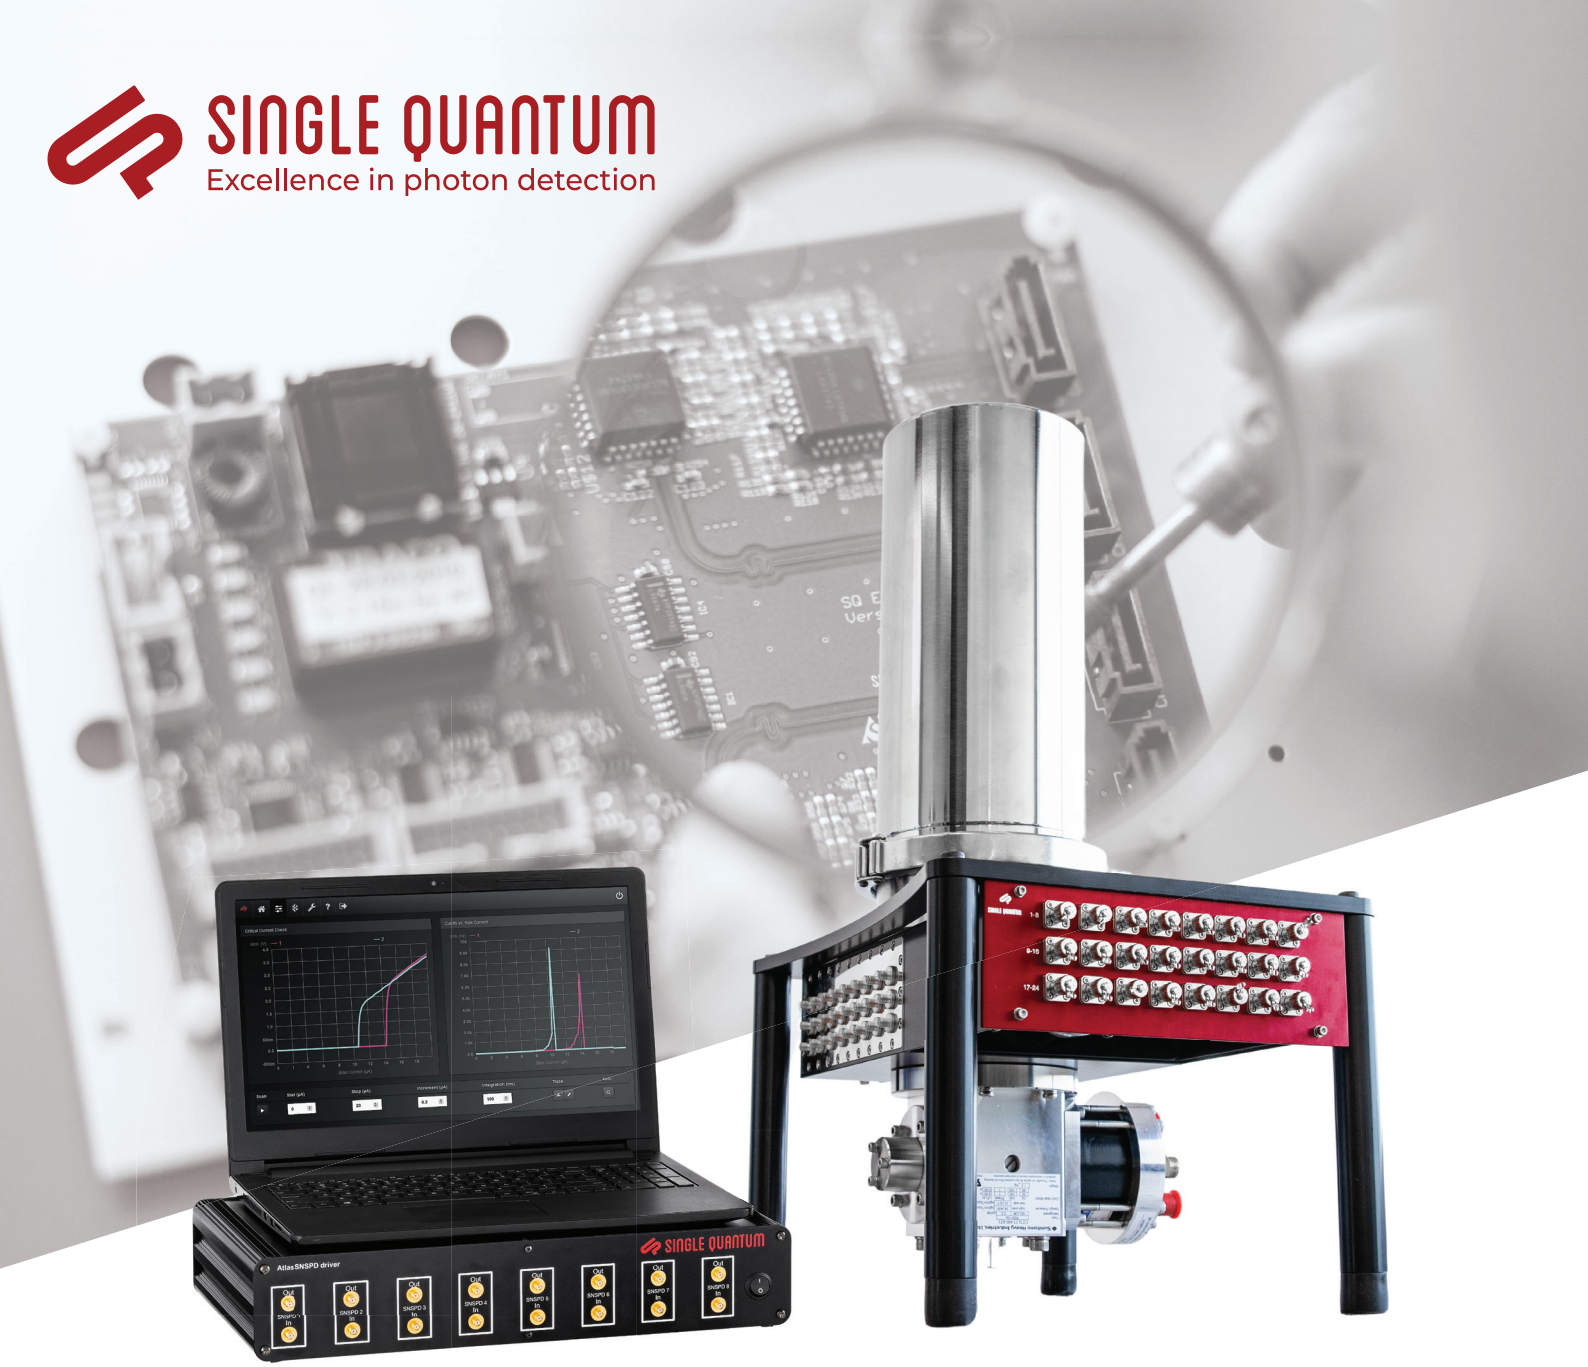
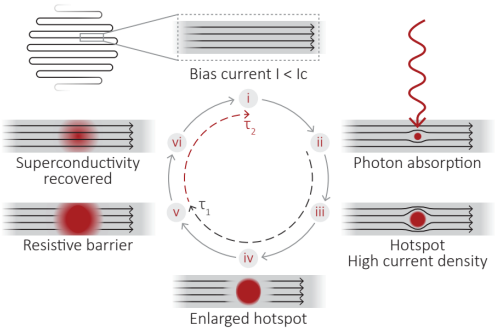
SINGLE QUANTUM
Excellence in photon detection



We make the world's fastest and most sensitive light sensors

limited only by the laws of physics

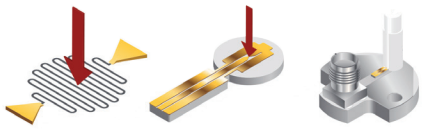


The photon detection

Once a single photon is absorbed in the nanowire, superconductivity is locally broken. As a result, the current is directed towards the amplification electronics and creates a voltage pulse. The detection process takes ~ 10 ps, after which the superconductivity quickly recovers in the nanowire.

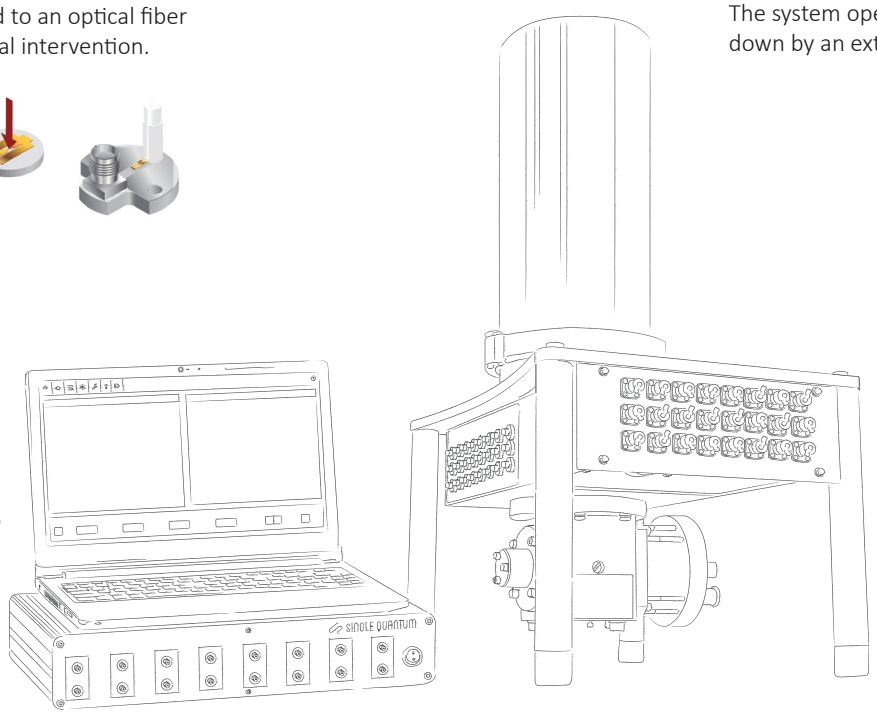
Fiber coupling

Each detector is coupled to an optical fiber without requiring manual intervention.



Closed-cycle cryostat

The system operates at 2.5 Kelvin, cooled down by an external helium compressor.



Electronic driver

Our driver and software are unique and enable fully computer-controlled operation, making it effortless to interface with any programming language.

Plug-and-play

The design ensures continuous operation of more than 10,000 hours.

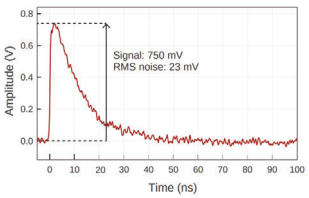
Single Quantum Eos

Superconducting single photon detection system

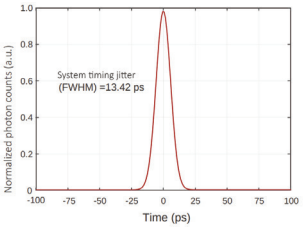
Specifications

Optimization wavelength	800 nm	900 nm	1064 nm	1310 nm	1550 nm
System detection efficiency	≥ 90%	≥ 90%	≥ 85%	≥ 85%	≥ 90%
Timing jitter	≤ 15 ps	≤ 15 ps	≤ 15 ps	≤ 15 ps	≤ 15 ps
Dark count rate	≤ 1 cps	≤ 1 cps	≤ 10 cps	≤ 10 cps	≤ 1 cps
Maximum count rate	≥ 80 MHz	≥ 80 MHz	≥ 50 MHz	≥ 50 MHz	≥ 50 MHz
Ultra-high count rate detectors	≥ 800 MHz	≥ 800 MHz	≥ 600 MHz	≥ 600 MHz	≥ 600 MHz

Detector output @1550 nm



The best timing jitter on the market



New developments

SQCam™
Single Photon Camera

Eos R12™
Rack-mountable SNSPD System

Interleaved Detectors
Photon Number Resolving and Ultra-high Countrate

Product lines

Excellence
For scientist who need the very best to excel

Imaging
Near-infrared range to see deeper and better

Tele-QKD
Single photon detectors for industrial QKD systems

The unique combination of unparalleled detection efficiency and time resolution is what makes our superconducting detectors the ideal choice for quantum communication, cryptography, infrared fluorescence spectroscopy, laser ranging and many other applications.

At Single Quantum, we confront every challenge with innovation, dedication, and passion.

Founded in 2012 in the Netherlands, our team emerged as true pioneers of single photon detection technology: we were among the first to manufacture and commercialize superconducting nanowire single photon detectors.

Since then, our multi-channel Single Quantum Eos photon detection system has been chosen by more than 200 academic and industrial labs all over the world.
